

#### **DECENTRALIZED AUTONOMOUS VEHICLES**

One Token to Move Anything Anywhere

# Why We're Here

The future of transportation is a network of autonomous vehicles (AV).

We're building the infrastructure which enables those vehicles to discover, communicate, and transact with one another using a digital currency called DAV. As AV transportation continues to grow, so will the value of the DAV Token.

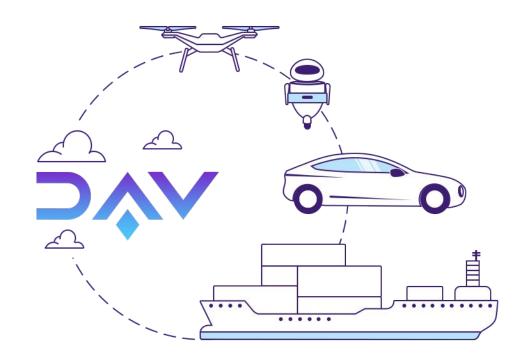

Will you be a part of it?

### What Is DAV?

DAV is a computer network that connects self-driving vehicles (such as cars and drones) to everyone on that network.

Users can pay for the use of any of those vehicles with one token to get a ride somewhere or pick up and deliver a package.

People who own those vehicles or help service them on the network make money for the services they provide.

### **How It Works**

An open source transportation platform that allows for Autonomous Vehicle collaboration and economic incentives for fast scaling.

AVs transact with each other automatically, which is then verified using blockchain smart contract technology and paid for using DAV Tokens

#### Peer-to-Peer

Users and service providers find each other and communicate directly to order rides or schedule deliveries

#### **Incentives**

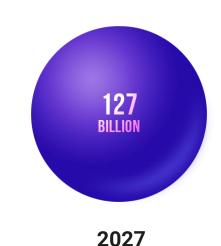

Anyone can be a provider and earn tokens by owning vehicles or charging stations and making them available to others

## **Market Size**

2017

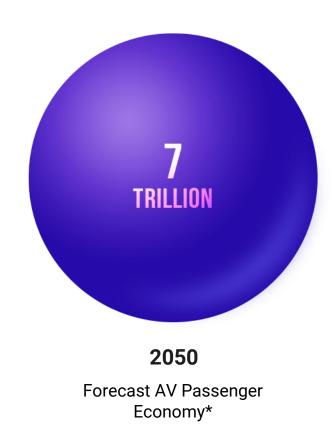

**Current Total AV** 

Market

Forecast Total AV

Market

<sup>\*</sup>As shown by Intel in their whitepaper, The Passenger Economy represents the value of the products and services derived from the use of fully autonomous, pilotless vehicles.

# Why Now?

Time until Alphabet and Ford roll out self-driving ride hailing fleets

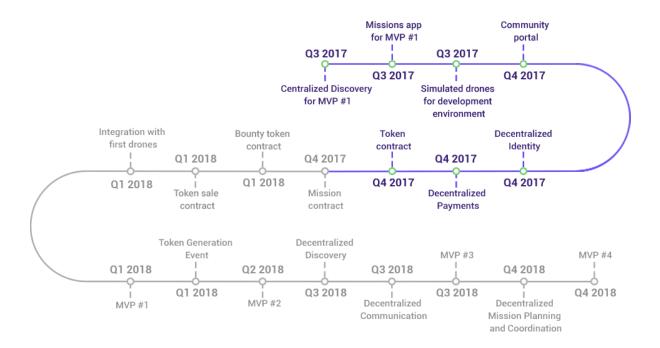

Percentage of the U.S. passenger miles that will be served by autonomous vehicles by 2030

Year in which 60% of vehicles on the road will be autonomous and dedicated to Transportation as a Service (TaaS)

## Roadmap

#### **Team**

Noam Copel - CEO and Co-Founder

- Founder of world's first smartphone encryption system in 2003, distributed in over 50 countries
- Blockchain, cryptocurrency and encryption expert
- Successful serial entrepreneur

Tal Ater - CTO and Co-Founder

- 20 years of experience as a developer and entrepreneur
- Published O'Reilly author
- R&D Director and VP of Product at Somoto (TASE: SMTO)

**Eyal Herzog - Crypto-economics Advisor**Co-Founder and Product
Architect at Bancor

Nick Johnson - Blockchain Advisor Creator and Chief Developer of the Ethereum Name Service

Scott J. Horowitz -Aerospace Advisor NASA Astronaut and Commander

Jay Adelson- Internet Infrastructure Advisor Founder Equinix, Digg, Revision3, Simple Geo and Opsmatic

Joe Lopardo CMO

Rachel Linnewiel Head of External Relations

**Abhishek Singh** Senior Developer

Andrew Grunstein Research and Business Development

**lurii leltsov** Head of Design
